

COHORT 5

Vibe Coding Foundations

April 2026

Agenda

1. Meet your instructor
2. Course overview
3. Intros
4. Q&A

What is vibe coding?

Where the term came from

Andrej Karpathy ✓

@karpathy

There's a new kind of coding I call "vibe coding", where you fully give in to the vibes, embrace exponentials, and forget that the code even exists. It's possible because the LLMs (e.g. Cursor Composer w Sonnet) are getting too good. Also I just talk to Composer with SuperWhisper so I barely even touch the keyboard. I ask for the dumbest things like "decrease the padding on the sidebar by half" because I'm too lazy to find it. I "Accept All" always, I don't read the diffs anymore. When I get error messages I just copy paste them in with no comment, usually that fixes it. The code grows beyond my usual comprehension, I'd have to really read through it for a while. Sometimes the LLMs can't fix a bug so I just work around it or ask for random changes until it goes away. It's not too bad for throwaway weekend projects, but still quite amusing. I'm building a project or webapp, but it's not really coding - I just see stuff, say stuff, run stuff, and copy paste stuff, and it mostly works.

Andrej Karpathy's original tweet on vibe-coding

Vibe coding is wildly
misunderstood.

... it is closer to **vibe engineering**.

- **Coding Agents** = Understand English, trained on corpus of internet data - but struggle with ambiguity & amnesia
- You **need the right vocabulary, methods & tools** to go from prompts to prototypes
- **You = the orchestrator** (*idea, context, taste, manager*)

AI agents are junior engineers.

Fast & eager

Confidently wrong

Need great specs

Your job in this course: learn to be the best manager an AI junior engineer has ever had.

Some vibe coding trends...

25%

of Y Combinator startups rely heavily on AI-generated code for their core systems

90%

of code will be AI-generated in as little as three months, according to Anthropic CEO Dario Amodei

44%

use vibe coding for UI generation - forms, components, layouts

Faster iteration cycles

Individual productivity scaling

Cost savings

Source: Vercel v0 State of Vibe Coding Report (Sept 2025)

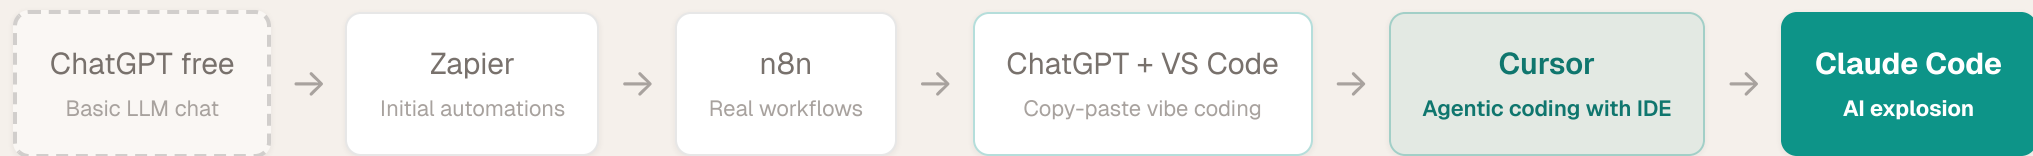

My path to vibe coding.

- **Santa Barbara, CA & Seattle, WA**
- **5 years in Latin America**
- **Ops & Product across startups**
- **Nuvocargo** (YC W18) - AI product at a cross-border logistics startup
- **Vibe coded personal projects** - record valuator, recipe converter, product scraper, personal agents
- **Building production tools at work** - scheduling agents, document bots, prediction dashboards
- **Now: teaching what I build every day**

Non-technical background. Went from zero code to shipping production AI tools in under a year.

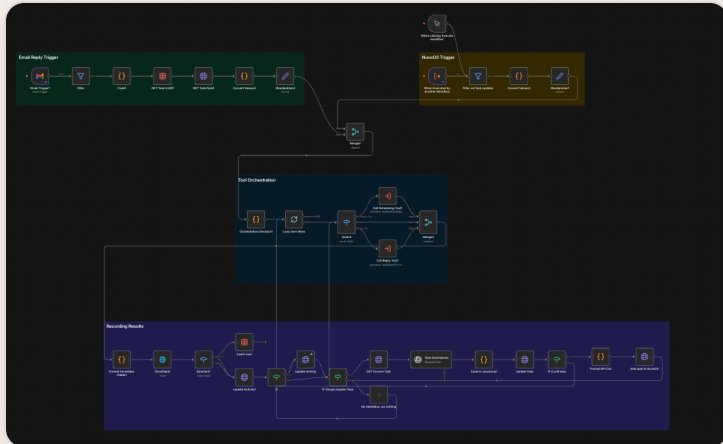

How I learned this...

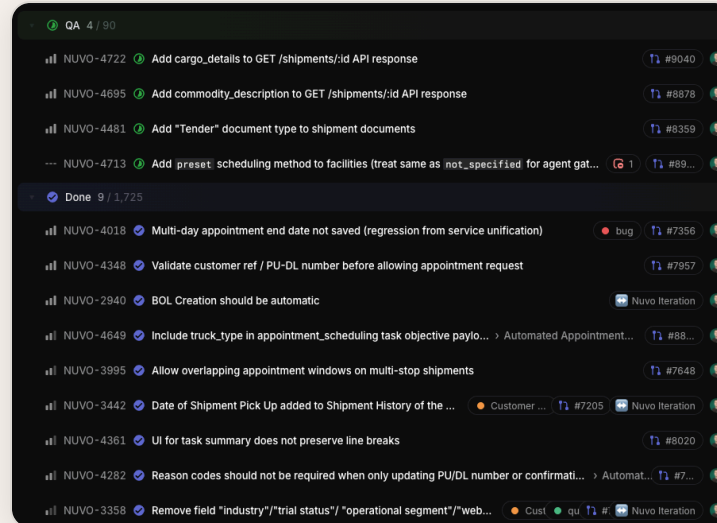

← →

What I've built at work.

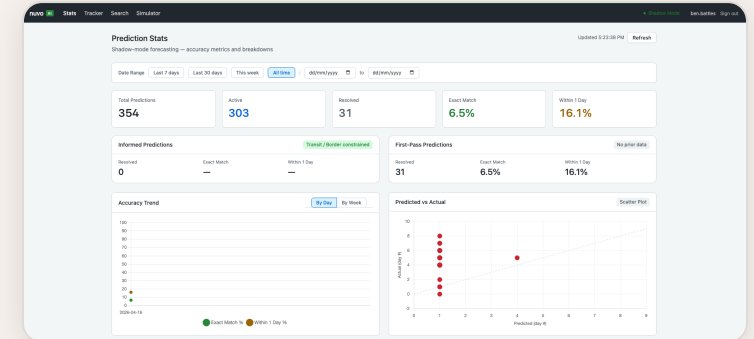

Scheduling Agent

Autonomous email agent that books truck appointments

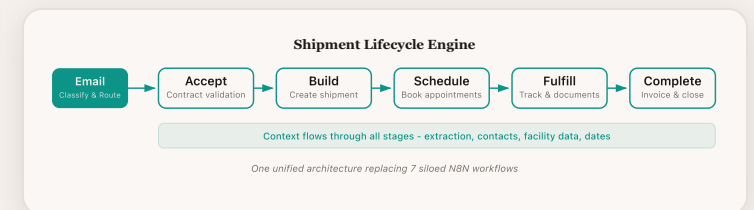

90+ Linear Tickets

Owning and shipping work like an engineer

Prediction Agent

Forecasts shipment appointment dates

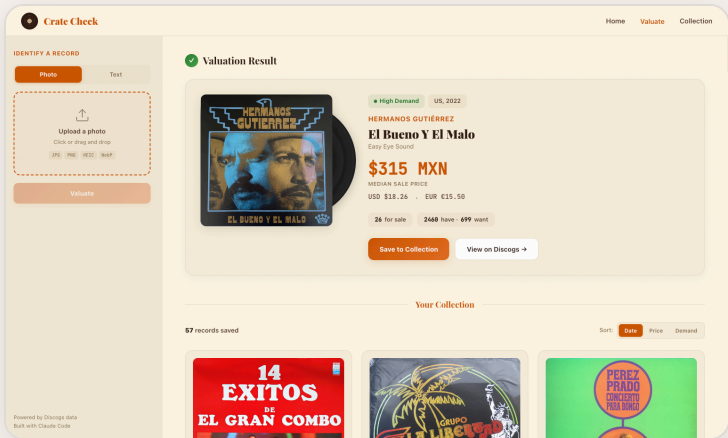

Shipment Lifecycle Engine

Unified architecture for all automation

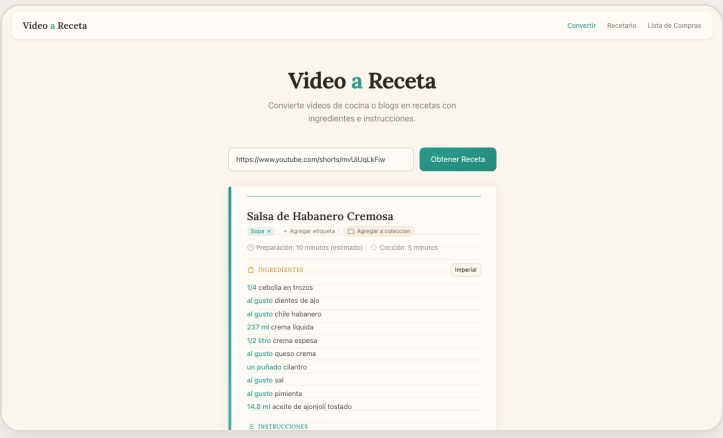

What I've built for fun.

Build something you're interested in

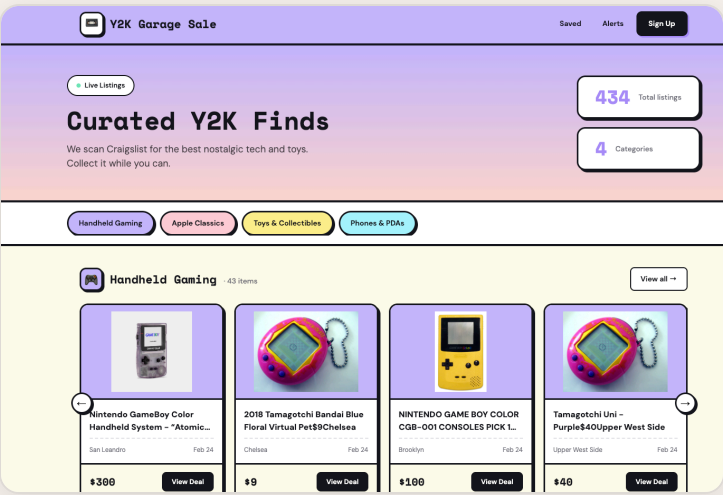

Crate Check

Record valuator and collection database powered by Discogs marketplace data

Video a Receta

Converts YouTube, TikTok, and Instagram recipes into a recipe database with shopping lists

Y2K Garage Sale

Python webscraper that finds Y2K electronics and collectibles on Craigslist

Context is the **new code**.

Prompt engineering → context engineering

It's not about the prompt. It's about the context around it.

Think like a PM, not a programmer

Define *what* and *why*. AI handles *how*.

SAME TASK, DIFFERENT CONTEXT

Vague:

"Build me a landing page"

With context:

"Build a waitlist page for a productivity app targeting remote workers. Follow the design guidelines in [/docs/brand-guide.md](#). Hero section with value prop, email capture, and social proof. Reference: [linear.app](#), [cal.com](#). Use the copy from [/docs/landing-page-copy.md](#)"

5-week roadmap.

1

LLM Fundamentals

- What LLMs are and how they work
- What they're good (and bad) for
- AI landscape overview
- Build your first site with Lovable

Output: Lovable Website

2

Vibe Coding Foundations + Sprint 1

- Set up Claude Code, VS Code, GitHub
- Backend, frontend, hosting
- Your first real web app
- Git basics & version control

Output: Launch Web App

3

Deep Dive with Claude Code

- Effective prompting
- CLAUDE.md & Plan Mode
- MCPs & context management
- Start your final project PRD

Output: Final Project Spec/PRD

4

Building with LLMs + Sprint 2

- How to augment LLMs
- Agents vs workflows
- Choose: n8n automation OR chat assistant
- Integrate AI into your project

Output: n8n automation or AI chat assistant

5

Evals + Final Project

- Evaluate AI performance
- LLM-as-a-Judge
- Polish & ship your prototype
- Prepare your demo

Output: Final Project

Anatomy of a week.

TUESDAY

Office Hours

9:00 AM PT

- Starts Week 2
- No agenda - come with questions
- Screen share, debug together

THURSDAY

Guest Speaker

9:00 AM PT

- Presentation & live demo
- Real builders sharing their experience
- Q&A

FRIDAY

Group Discussion

9:00 AM PT

- Individual shares & demos
- Active recall + pair programming
- Next week's syllabus released

60% async learning

40% together

KEY DATES

Sunday, April 20 - Kickoff + Intros (today!)

Friday, May 23 - Final Project 'Demo Day'

TIPS

Dedicate ~1-2hrs/day (~10hrs/week)

First two weeks are the most important!

← →

What you'll build with.

Your AI coding agent

AI-powered web app builder

Real-time database

Backend & database

Workflow automation

Editor & version control

How we'll work together.

WhatsApp group

Post questions, share wins, help each other. I'm active in the group and will share call recordings here.

Interactive sessions

I'll call on people, ask for definitions, ask for examples. Come ready to participate - not just watch.

1:1s when you need them

I'll reach out to check in, and you can always message me directly for a 1:1 to work through problems.

You belong here

If you've never written a line of code, you're exactly who this is for. The struggle is part of the learning.

TL;DR

- High agency
- Embrace the struggle
- Choose a project you want to work on
- Make friends along the way

Intros!

1. A little about your background
2. Why do you want to learn to vibe code?
3. What motivates you? What's your Everest?
4. Something silly / fun fact!

Say cheese!
